Cybersecurity package for smaller businesses

Key products and services to help smaller businesses improve cybersecurity and prepare for the Global Data Protection Regulations (GDPR)

Cyber attacks are becoming more frequent and smaller businesses are increasingly targeted due to their vulnerabilities. Consequences include business interruption, loss of data, trust and reputation.

With the new GDPR regulations coming into force on 25 May 2018, businesses are liable for fines of up to 4% of their turnover or 20m Euros per data breach. This could put smaller companies out of business altogether.

To close the cybersecurity gap for SMEs, EnterpriseRed has put together a comprehensive, low cost offering that helps companies become more cybersecure and prepare for the introduction of the new GDPR regulations.

BENEFITS

- Uses the latest technology to combat cybercrime
- Can offer rapid improvement to your cybersecurity
- Document and email encryption shows customers your commitment to cybersecurity – a key differentiator
- Helps with GDPR2018 compliance
- Training for your employees to help further reduce cybercrime

Key components of the offer:
